

Spring Workshop

	KS1/KS2 ACTIVITIES
I	NEW LIFE (Spring term, March - April) Lifecycle of animals.
<p>Call in at the maternity unit to see the ewes and their babies, then help feed the lambs. In the animal barn, meet all the other baby animals. This could include chicks, piglets and calves.</p> <p>Discuss the differences in how mammals are born as compared to chicks. Why do we think animals are more likely to be born in spring? Spring not only brings new life for animals but also for plants. There will be the opportunity for each child to plant a sunflower to take away with them.</p>	
Learning Objectives	<p>Learn about the lifecycle of animals on the farm. To understand why more baby animals are born in the spring. To use all senses to experience the animals.</p>
